Conflux DevKit

ONE COMMAND. FULL CONFLUX.

Batteries-included Conflux development stack — local node, AI tools, DEX, and templates

---

GLOBAL HACKFEST 2026
Developer Experience & Tooling Track

BUILT ON CONFLUX

Setup friction is killing Conflux adoption

WITHOUT DEVKIT

30+ min	20+ min	30+ min	???
Install & configure local Conflux node	Keystore, accounts, funding wallets	Hardhat, contracts, DEX, toolchain	AI agent tooling No docs yet

Total: half a day before writing product code

Who suffers most?

1. Hackathon teams — lose their first sprint to infra
2. Web2 devs evaluating Conflux for the first time
3. AI-assisted teams needing reliable chain ops

4+ hrs

typical first-day setup time for a new Conflux developer

↓

< 2 min with DevKit

From zero to building in under 2 minutes

WITHOUT DEVKIT

```
$ brew install conflux-node
$ conflux --config devnet.toml
Error: port 12537 already in use
$ npm install hardhat @nomicfoundation/...
$ npx hardhat compile
Error: evmVersion "shanghai" not supported
$ ... 4 hours later, still debugging ...
Error: insufficient funds for gas
$ echo "I give up"
```

WITH DEVKIT

```
$ git clone ... && open in container

✓ Conflux node running (eSpace + Core)
✓ 10 accounts funded with 1000 CFX
✓ MCP server ready (30+ tools)
✓ DEX deployed & seeded
✓ Editor extension active

Ready to build! Time: 1 min 47 sec
```

WHAT'S IN THE BOX

- Devcontainer
- Conflux Node
- Local DEX
- MCP Server
- Editor Ext
- Scaffold CLI

The result: `git clone → Reopen in Container → building`

The only Conflux dev env built for AI agents

MODEL CONTEXT PROTOCOL (MCP)

The open standard for LLM tool use — adopted by GitHub Copilot, Claude, and every major AI coding assistant

conflux_*
Node lifecycle, keystore, deploy, bootstrap, contracts, network
12 tools

blockchain_*
Balance, blocks, transactions, contract calls, send CFX
8 tools

dex_*
Deploy DEX, seed pools, manifest, translation table
6 tools

workspace_*
Dev server, logs, stack status, health checks, operations
4+ tools

AI Agent Chat

"Deploy the ExampleCounter contract to eSpace"

→ conflux_bootstrap_entry
Found ExampleCounter.sol, reading source...

→ conflux_bootstrap_prepare
Compiled, ABI generated, constructor: (uint256)

→ conflux_bootstrap_deploy
chain: espace, args: [42]

✓ Deployed at 0x8A79...3f2B
Gas used: 234,561 · Block: 47

Contract is live. Want me to call increment()?

The AI doesn't need to know Conflux — the 30+ typed MCP tools handle the complexity.

30+ tools | 4 categories | Any MCP-compatible agent

What you saw in the demo

01 AI-Powered Deploy

- Ask Copilot to deploy
- AI calls 3 MCP tools
- Contract deployed in seconds
- No CLI commands needed

```
→ bootstrap_entry
→ bootstrap_prepare
→ bootstrap_deploy
✓ Deployed 0x8A79...3f2B
block: 47, gas: 234k
```

Zero Hardhat commands

AI handles the full deploy pipeline

```
ALSO DEPLOYED ON TESTNET
0x976c...2b93 · evmtestnet.confluxscan.org
```

02 Local DEX

- Uniswap V2 on local eSpace
- 15 token pairs, real prices
- CoinGecko-seeded liquidity
- AI can query prices & swap

```
DEPLOYED CONTRACTS
Factory 0x5FbD...B848
Router02 0x2De1...6dE8
WETH9 0xD99D...7b14
+ 15 MirrorERC20 tokens
```

Test DeFi locally

Real swap logic, real price curves

```
INCLUDES DEX UI
React swap interface on :8888
```

03 Scaffold CLI

- One command project setup
- 3 templates ready to use
- Devcontainer pre-wired
- Interactive template picker

```
$ npx @cfxdevkit/scaffold-cli new
? Select a template:
❯ minimal-dapp
wallet-probe
project-example
(↑↓ to select, enter to confirm)
```

Instant project bootstrap

Complete dApp with contracts + frontend

```
PUBLISHED ON NPM
@cfxdevkit/scaffold-cli v0.2.0
```

All demonstrated live in the 4-minute demo video

How it's built

DEVCONTAINER

AI Agent
Copilot, Claude, or any
MCP-compatible assistant

← MCP →

devkit-mcp (MCP Server)
30+ tools conflux_*, dex_*, blockchain_*
workspace_*, backend_*

Editor Extension
Status bar, command palette,
log streaming, contract tree

| HTTP
▼

AI CONTROL PLANE

devkit-backend :7748
REST API · Process manager · Contract registry · DEX orchestrator
Always-on service inside the devcontainer — auto-starts with the workspace

▼ ▼ ▼

Conflux Node
REAL NODE, NOT MOCK
eSpace :8545 · Core :12537
Persistent state, resumable

Local DEX (Uniswap V2)
Factory + Router + WETH9
15 token pairs, seeded pools

DEX UI :8888
React swap interface
Tailwind, wagmi v2, viem

Scaffold CLI + Templates
minimal-dapp · wallet-probe · project-example · extensible for community projects

Deep Conflux integration, not just "EVM compatible"

eSpace (EVM-Compatible)

Chain 2030

- Full Ethereum-compatible RPC on :8545
- All example contracts deploy here first
- DEX (Uniswap V2) runs on eSpace
- wagmi + viem + ethers.js support
- EVM target: Paris (no PUSH0)

ADDRESS FORMAT
`0x976c5ead65b8f51c5cbf3117f41d11548f992b93`

Testnet: 71 | Mainnet: 1030

Core Space (Conflux-Native)

Chain 2029

- Native Conflux RPC on :12537
- Internal contracts accessible
- AdminControl, SponsorWhitelist
- Gas sponsorship in scaffold templates
- Cross-space bridge pre-configured

ADDRESS FORMAT (CIP-37 BASE32)
`cfx:aatktb2te25ub7dmyag3p8bbdgr31vrbeackztm2rj`

Testnet: 1 | Mainnet: 1029

Cross-Space Bridge

Pre-configured for local development · Multi-chain deploy with address format handling · bootstrap_deploy_multi

eSpace ↔ Core

Not just an EVM fork — real Conflux infrastructure with both spaces, internal contracts, and sponsorship.

Built by a Conflux ambassador, refined over years

cfxdevkit.org
Individual utilities
Node mgmt, wallet tools

Consolidation
Monorepo architecture
pnpm workspaces

DevKit Stack
Devcontainer + MCP
AI-first, full local env

Hackfest 2026
Unified platform
This submission

Why this exists

- Years of practical Conflux ecosystem experience
- Solved the same setup problems repeatedly
- Multiple utilities consolidated into one platform
- This hackathon = the unification of it all

COMMUNITY-FUNDED MODEL
Donations first — token utility only when community and product maturity warrant it

What's been built

30+ MCP tools	**15** DEX pairs	**3** Templates
2 Chain spaces	**10** Genesis accts	**1** Editor ext

TARGET Every Conflux developer with access to a devcontainer-capable machine or hosted service

Community-first growth, ecosystem expansion

Distribution Strategy

01 GitHub Templates + Codespaces
One click → running dev environment (primary entry point)

02 Conflux Docs Integration
DevKit in official "Getting Started" guide

03 Editor Extension Marketplace
Discovery channel for developers already in their IDE

04 cfxdevkit.org + Community
Docs, tutorials, Discord, and developer forums

Ecosystem Expansion

ChainBrawler
Game integration as scaffold template + MCP tools
In-game token economies via local DEX

CAS (DeFi Automation)
Limit orders, automated strategies on local DEX
Development & testing via MCP server

Community Projects
Any project can become a template, backend module, or MCP tool extension

DevKit Bounties / Mini-Hackathons
Focused events to attract contributors and build a developer community around the tooling

FUNDING	Community-funded now → token utility only when mature
GRANTS	Seeking technical validation & promotion from Conflux, not primarily funding

What's next

PHASE 1 ✓ Foundation (Hackathon)

NOW

- ✓ Devcontainer + local node
- ✓ MCP server (30+ tools)
- ✓ Local DEX
- ✓ Editor extension
- ✓ Scaffold CLI
- ✓ 3 templates
- ✓ cfxdevkit.org

PHASE 2 Stabilization & Community

MONTHS 1–6

Month 1
Docker image + extension published

Month 2-3
10+ external users, 20+ scaffolded projects

Month 4-6
First integrated project, docs link, bounty

Also
Hardhat plugin, Scaffold CLI wizard, donations

PHASE 3 Ecosystem Growth

MONTHS 6–12

ChainBrawler
Game template + MCP tool extension

CAS DeFi
Automated strategies on local DEX

CI/CD
GitHub Action for testnet deploys

Grant
Seek Conflux grant for validation

PHASE 4 Platform Maturity

YEAR 2+

3+ community projects integrated · Token utility (if warranted) · Mobile dev mode · Enterprise features · Full grant partnership

Technology first. Tokens only when the community is ready.

Team cfxdevkit

SP

Solo Builder

SP

Solo developer & Conflux Ambassador

Architecture | Backend | Smart Contracts | Frontend | AI / MCP

Background

- Years of Conflux ecosystem tooling experience under cfxdevkit.org
- Built multiple standalone utilities, now unified into DevKit
- Active Conflux ambassador and community contributor
